- AWS Infrastructure
- AWS Connectivity
- AWS Customer Enablement
- Q&A

What is Cloud Computing? What is AWS Government Regions?

Cloud computing is the **on-demand** delivery of IT resources with a **pay-as-you-go** pricing model

AWS provides commercial cloud in the form of Government Regions to meet specific compliance and data classification needs. This provides a **broad and deep** platform that helps customers build **sophisticated, scalable, secure** mission applications

What are the **Primary Drivers** for moving to the cloud?

Increased Agility

Provision infrastructure in minutes instead of months

Elasticity

Stop guessing capacity, scale up and down on demand

Cost Savings

Only pay for what you use, lower upfront expenses

Innovate Faster

More time focused on the mission, not infrastructure

Global in Minutes

Quickly Deploy new services as mission needs change

AWS Region design

AWS Regions are comprised of multiple AZs for **high availability**, **high scalability**, and **high fault tolerance**. Applications and data are replicated in real time and consistent in the different AZs.

Availability zones design for resiliency

100K+ servers at scale

ISOLATED PARTITION

Fully isolated with one or more datacenters

POWER

Highly available, fault tolerant, and scalable

DISTANCE

Physically separated by a meaningful distance – all within 60 miles (100km) of each other

INTERCONNECTION

Datacenters connected via fully redundant and isolated metro fiber

AWS Regions for DoD

AWS GovCloud (US)

● IL2 Commercial AWS Regions

● IL2, IL4, and IL5 GovCloud AWS Regions

- 2 regions: US-East & US-West
- Accounts issued to US persons/companies only (to administer according to their security compliance regime)
- Data, network, and machine isolation
- Unique authentication with separate & isolated credential database and dedicated management console
- Managed by U.S. citizens on U.S. soil
- FIPS 140-2 compliance
- Service(s) are deployed into Region based on customer demand

Additional Regions Available at S and TS

GovCloud Regions offers the same high level of security as the other AWS Regions... restricted to approved US Persons

AWS US Regions Infrastructure

First Cloud provider to offer regions for Unclassified, Sensitive, Secret and Top Secret data

Understanding the AWS Global Infrastructure

REGION

A physical location where we cluster data centers. Each Region consists of a minimum of three isolated, and physically separate AZ's.

AVAILABILITY ZONE (AZ)

One or more discrete data centers with redundant power, networking, and connectivity in an AWS Region.

LOCAL ZONES

AWS Local Zones place compute, storage, database, and other AWS services closer to end-users so you can run latency-sensitive applications and meet data residency requirements in more locations

POINTS OF PRESENCE

Reduce latency by delivering data through 450+ globally dispersed Points of Presence (PoPs) with automated network mapping and intelligent routing using Amazon CloudFront.

WAVELENGTH ZONES

AWS infrastructure deployments that embed AWS services within telecommunications providers' data centers at the edge of the 5G network.

DIRECT CONNECT LOCATIONS

The Direct Connect service establishes a private, physical network connection between AWS and your data center or office environment – bypassing the public internet.

OUTPOSTS

AWS Outposts are a family of fully managed solutions delivering AWS infrastructure and services to virtually any on-premises or edge location for a truly consistent hybrid experience.

Snow Family

The AWS Snow Family supports intense edge compute and storage workloads in the most austere environments, to include Denied, Degraded, Intermittent, and Latent (DDIL).

DoD SCCA FRD V2.9

- Secure Computing Architecture (SCCA) Functional Requirements Document (FRD)
- Released March 9th 2017
- Replaces the Draft CAP FRD
- Provides implementation **flexibility**
- **Freedom** to architect and manage as a shared services enclave
