

See what's possible

Setting the conditions for DoD innovation, collaboration,
and emerging technical capabilities to succeed at scale.

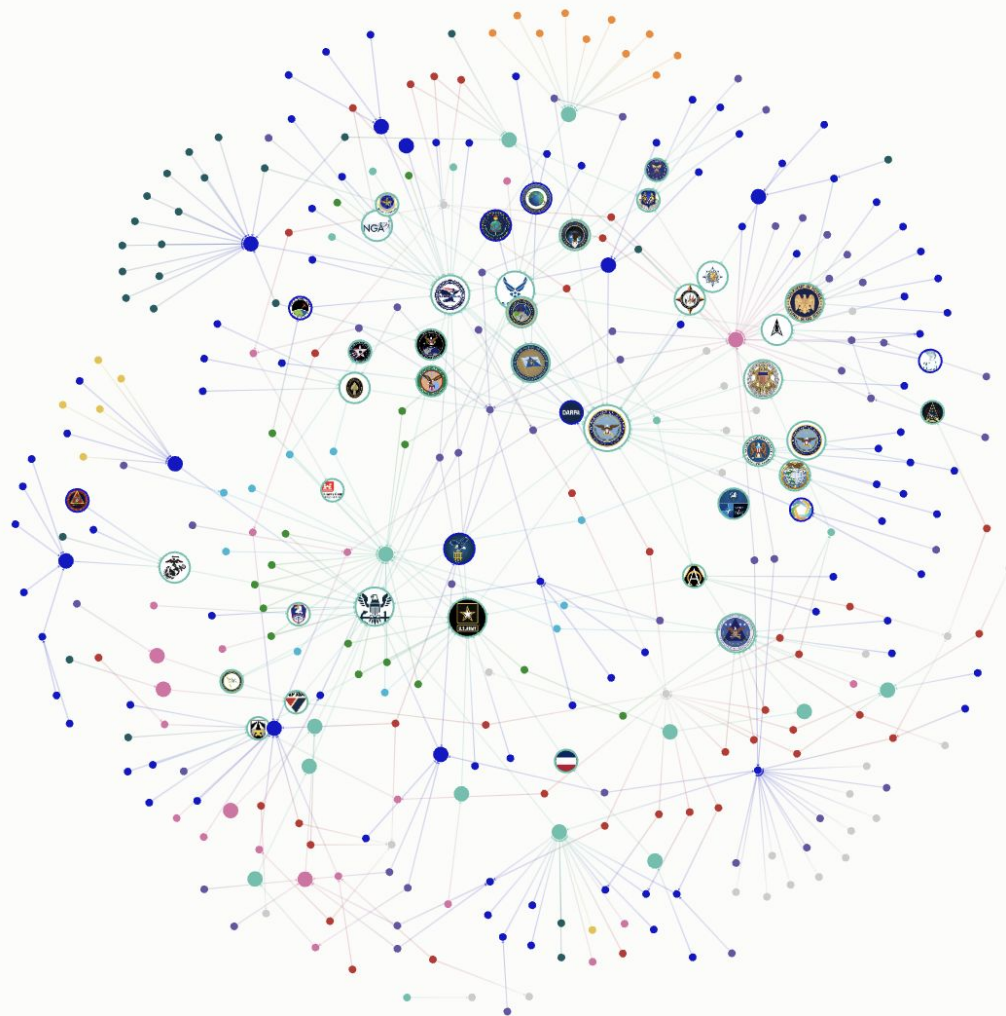

VISION is now in each of the
branches of the DoD and
beginning to show the value
of seeing efforts connecting
in one **single source of truth**.

With VISION, the DoD is driving
mission capabilities so we can stay
ahead of our adversaries as our
speed, agility, and readiness
become more critical than ever.

Data Moats

Federal Innovation Ecosystem Breakdowns

Ineffective Data and Collaboration

From granular, siloed, branch-specific day to day perspective to unlimited collaboration opportunities across organizations

Legacy Systems

Provide accessible IL4 cloud-based tool to modernize the ecosystem

Disconnected from Resources

Engage data and connections to SBIR/STTR, emerging technologies as well as internal resources

Unknown Redundancies

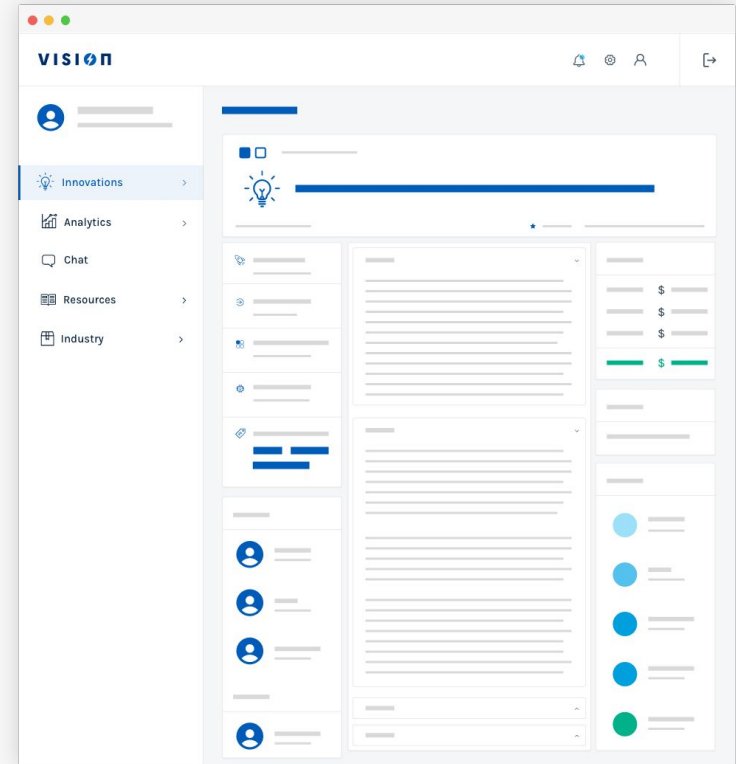

Eliminate wasted taxpayer resources: time, energy, and money

VISION

BLUF: Ingenuity to Capability Joint Innovation System

Members use the secured DOD deployment of VISION to discover, collaborate, and progress innovation and improvement solutions for mission critical joint branch initiatives.

VISION provides leadership the strategic data to advance projects and allocate resources while syncing initiative portfolios across priorities.

Power of the Data

What's Possible?

Tracking Return on Mission Effectiveness®

Enterprise Data Integrity

Current State

- Current state: Inability to see the whole picture in real time
- DOD has large amounts of disparate, disconnected innovation data
- There is no magic wand to integrate and act on currently existing data

What VISION Makes Possible

- External data sources are integrated and normalized
- New initiatives start with normalized data (forcing function for entry)
- Innovation is dynamic—normalizing data at the source decreases processing time and allows for faster decision making

A DOD enterprise approach creates a gate for establishing minimum data requirements. This is the only way to create a single source of truth.

Data Normalization

The process of creating a cohesive form of data entry that ‘cleans’ the information to remove unstructured or redundant data. This process facilitates AI/ML data processing for more accurate analysis and informed decisions.

USER WINS

VISION in Action

De-duplication of Effort

Tesseract deconflicted 12 disparate efforts for a Manpower and Aircraft Scheduling Tool.

Impact: Saved **\$17M**, enterprise solution

VISION Initiative #671

Joint Collaboration

Navy and Air Force teams identified multiple parallel long-range communications efforts.

Impact: Cost savings, joint problem solving

VISION Initiative #3591

Replicable Solution

PACAF replicated mobile cargo measurement system across 9 locations.

Impact: Agile combat support (INDOPACOM)

VISION Initiative #2657

Innovation at Speed

Gryphon Spark used VISION to accelerate a 60K Toolbox augmentation approval.

Impact: Right solution mass produced

VISION Initiative #988

Built to Scale

Leveraging the Data

IMPACT

- **Connection** via VISION
- **Value** via RoME™
- **Agility** via DAPM
- **Collaboration** via PSAC
- **Speed** via RONN
- **Investment** via VCIP
- **Scale** via IGNITE

1

Deconflict and align DoD innovation efforts with strategic priorities

VISION

RoME™

DAPM

2

Allow department leaders to make informed choices about investments (*clear oversight*)

VISION

RoME™

VCIP

RONN

3

Create and field replicable capabilities at speed and scale

VISION

IGNITE

VCIP

DAPM

4

Promote stronger collaboration across services (*joint problem sets*)

VISION

RONN

PSAC

5

Foster a more vibrant innovation ecosystem for competitive advantage

VISION

Joint Innovation System

The only Joint Force and Allied Forces ecosystem built for innovation, improvement, and management that DOD members use to engage and collaborate on their initiatives across multiple domains.

The Joint Innovation System gives our warfighters and senior military leadership the capabilities to rapidly visualize data analytics and make decisions at the speed of relevance to meet the pacing challenge.
