

AIDN Lighthouse Program

➞ INTRODUCTION

Welcome to Artificially Intelligent Defined Networking (AIDN). The AIDN Lighthouse Program serves as a pivotal step in validating the potential of this AI rooted security solution to meet market viability. This outlines the objectives, methodology, and expected outcomes of the Lighthouse Program to ensure a successful implementation and a return on investment of time.

➞ EXPECTED BENEFITS

- AIDN's Lighthouse Program entitles you to:
 - Revolutionary early access to the fastest threat detection using AI
 - Preventing outages and data loss to due to unknown malicious traffic, including:
 - Vertical Threat Detection: Discovering threats at the gates
 - Lateral Threat Detection: Discovering threats from within
 - Direct access to our engineering, development, and data scientist teams

Join an elite community of innovators that are exploring AI to handle threats beyond human speed!

➞ DURATION

7-14 day onboarding. 30-60 days evaluation. Eligibility for extension

OUR PROCESS

1. **Onboard:** Establish high-level overview and strategy, platform vision, roles and responsibilities, as well as the understanding of existing pain points, challenges, and establish desired outcomes.
2. **Deploy:** Launch AIDN Platform to participant non-prod environment
3. **Evaluate:** Rigorous testing of the technology's performance, scalability, security, and usability against predefined discussions in kickoff
4. **Validate:** Confirm the solution's mutual fit for participant and platform and collect feedback for refinement.

CONCLUSION

The Lighthouse Program is a vital step in the journey of adopting AIDN, a transformative technology. By validating the solution's capabilities and suitability, participants can confidently move forward with future implementation, knowing they have chosen a technology that aligns with their vision, needs, and objectives.

Participation in this program not only gives these participants early access to leading edge technology that is beyond the reach of industry peers, it also provides the opportunity to have a seat at the table in shaping the future of AI in IT security and operations.

Scale networks
Scale security
Don't scale budgets
